Electrical Chimes

Mr McElrath has referred to us your inquiry concerning electrically operated chimes for sounding NBC chime notes.

We have located a firm that can supply this equipment at what we consider a reasonable price, but we have no experience with this firm or their products, so cannot guarantee same. They claim, however, that they use good material, and if there is any further interest in the matter we will investigate them more thoroughly. The device they are willing to make up would consist of three hanging type tubular chimes, somewhat similar to the doorbell variety but equipped with an electric motor striking mechanism which will cycle the chimes N.B.C. notes. A single unit can be supplied for \$75.00, about two weeks delivery; \$50.00 in lots of 10.

I am assuming, of course, that you refer to mechanical-acoustic equipment. The problem of electrical pick-up and reproduction is much more complicated and will be considerably more costly.

Mello-Chime and Signal Company
Rt 2-5255 New York N.Y.
Mr L. O. Naylor

Dimensions, 11 1/2" x 4" x 5 1/2"
1-1/8" or 1 1/4" dia tubes
